- Threat intelligence

Blue Bastion Ironclad Endpoint
We combine AV/NGAV, DLP, and EDR into a powerful and affordable managed solution for your largest risk surface.

Internet

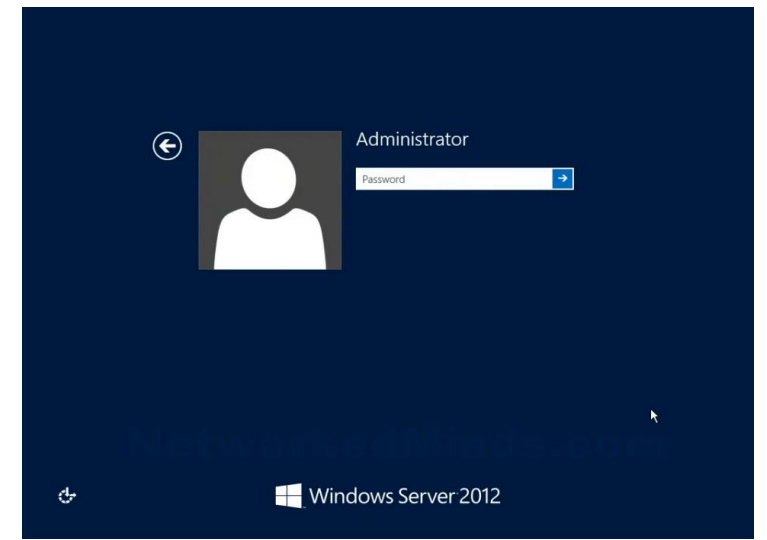

Routers

WAN Optimizers

NGFWs

WLAN Controllers

App Delivery Controllers / Load Balancers

D & D keeps blocked and filtered connections alive while rerouting them to a dynamic and high-interaction honeypot environment. Decoy opportunities allow real attacks to progress under granular observation. D & D's deception technology employs real machines, services and IP addresses rather than far less effective emulation techniques. This unique approach is key to D & D's real-time breach deception capabilities.

Lateral movement detected via policy violation on a Windows 2012 server = potential malicious user

Blue Bastion Hybrid Cloud Security Platform
Complete visibility for your data center and cloud-based applications/workloads and data. Includes detection of and deception for unauthorized lateral movement, thread-level collection for threat hunting and IR, and L4-L7 micro-segmentation
